PERIOD OF APPRAISAL: Performance will be assessed within 3 months of commencement and a 6 month probationary/qualifying period will also apply.

Background to STARTTS

STARTTS is a state-wide service funded by the NSW Department of Health and Commonwealth Department of Health to provide high quality assessment, treatment and rehabilitation services to people living in NSW who have experienced organised violence or trauma associated with the refugee experience. STARTTS is an Affiliated Health Organisation (AHO), a Non-Government Organisation whose services are deemed to be part of the NSW public health system.

STARTTS' service provision philosophy is predicated on a bio-psycho-social framework that incorporates a large range of clinical and psycho-social interventions informed by the latest advances in neuroscience and evidence based practice in relevant fields. As such, STARTTS provides a broad range of services including assessment; counselling for all age groups; psychiatric assessment and interventions; family therapy; group interventions; body-focused interventions such as massage, physiotherapy, acupuncture and pain management groups; support groups; programs for children and youth; and various strategies to increase the capacity of support networks and refugee communities to sustain their members.

The focus of the STARTTS' approach is on building capacity and empowering people and communities to take control over their own lives, using a strengths-based approach and building on individual, family, community and cultural strengths.

Background to the Program Area of the Position

STARTTS' Neurofeedback Clinic was established in 2007 to provide EEG assessment and neurofeedback treatment to survivors of torture and trauma. STARTTS has found that the application of neurofeedback coupled with psychotherapy has produced positive results with a group of clients who have severe and chronic trauma responses. Neurofeedback has been used with children, young people and adults. The success of neurofeedback with clients experiencing chronic trauma responses is based on a developing understanding of brain activity, the impact of traumatic experiences on brain functioning, and the adaptability and plasticity of the brain. To support the ongoing development of this clinical service, STARTTS is currently expanding the Neurofeedback program to incorporate Biofeedback-based assessment measures and treatment interventions.
